

## Calendar/User Setup Domain Model

### Assumptions:

- There is no event confirmation system for the secretary to judge how many people to expect at a given event
- Members cannot suggest events to the Secretary
- Secretary would not want to edit individual elements of the event/would be happy to edit the entire event and leave some parts untouched
- Members would be actively notified of changes
- No other noteworthy events occur, though this would be easy to implement

## Boat Management Domain Model

Assumptions:

- User is able to edit boat details without prior permission (and at will)
- Previous mooring locations ARE considered by the Secretary in allocations
- Secretary does not personally approve every boat and berth
