Peer Response

To Henric Gustafsson

First of all, terribly sorry for the late hand in. We realized that we had opened the submission of the individual below yours. So please excuse our delay.

Your domain model is looking good with all the requirements for grade 2 included. You made a nicer smaller (separate) model for how payments are authorized etc.
Clear relations and how things are related.

From a developer perspective, your domain model would be clear in how the program/ system should work. However a small documentation of what the program is about would be of great value just to clarify the point of the program. Though, a report or documentation was not a requirement for grade 2.

If a domain expert does not understand your model, that expert should probably re-consider their choice of profession.

Also one more thing to add, you might wanna consider using a software for making the domain model for the final submission. This will make the model look more professional and easier to read/grasp. An example of such software is Gliffy.com, and its free and easy to use.

Notes:
There is no connection between member and calendar.
(From problem description: "Members would also like to be able to participate in various boat club meetings and social activities." This through the club calendar.)
